New Web Tools to End The Pandemic

BERKELEY, CA. Upgrades for Covid-19 testing providers are available at publicpandemictools.com. Testing providers can add anonymous online contact tracing to the patient testing experience and ensure guidance and resource links accompany test results. Doctors can add online contact tracing to their treatment protocol.

The upgrade requires only use of the industry standard data format and a patient recognized PIN to access their test results. Testing providers can organize around geographic areas to create 100% data coverage for public virus location and proximity warning web services.

The service operates in addition to and independent of current efforts to end the pandemic. Patient access to risk location and proximity warning services is available at no cost. Sign up is also no cost for both testing providers and patient users. Esidian, the creator and operator, is a private California company and long time web service provider with thousands of daily users across North America.
